THB 500/class**

## **The Importance of Performing Arts, Visual Arts and Sports in Developing Your Child's Personality**

**Dance:** Dance helps develop a student's ability to communicate in a way that is different from the written or spoken word. It allows them to gain a heightened awareness of self & others, while experiencing the joy of expressing emotions through movement.

**Music:** Research has shown that the benefits of music education include improved aesthetic appreciation and reasoning ability. Our students have a variety of classes to choose from in our music programme.

**Theater:** From an early age, children create characters and stories to explore their worlds. Our theater classes will help students use their dramatic play skills to create characters, develop action & explore situations both like and different from their own. Puppetry, games, improvisation, storytelling and acting are some of the activities that will teach students how to tell a story and how to allow others to participate in developing dialogue and scenes. Students will also partake in decorating sets and costumes.

**Visual Arts:** Students gain knowledge of the concepts of art and design from patient instructors with professional skills in art. Students have the chance to take classes based on drawing, painting. They will develop their creativity and expression while creating original works with the guidance of our talented art instructors.

**Sports:** Sports activities provide many positive opportunities for children. We believe that participation in sports will enhance children's school accomplishments, while others believe that sports get in the way of their children's achievement. When sports are enjoyed in a balanced way and do not take over children's lives, they have great potential for making contributions to lifelong achievement.
